Data Collection

Description:
The first step is to gather the dataset. For this project, we use the **Telco Customer Churn dataset**, which contains information about customer demographics, services, account information, and churn status.

Columns in the dataset:

Column	Description
customerID	Unique customer ID
gender	Male / Female
Senior Citizen	1 if senior citizen, else 0
Partner	Has partner (Yes/No)
Dependents	Has dependents (Yes/No)
tenure	Number of months customer stayed
Phone Service	Has phone service (Yes/No)
Multiple Lines	Has multiple lines (Yes/No)
Internet Service	Type of internet service (DSL/Fiber/No)
Online Security	Online security add-on (Yes/No)
Online Backup	Online backup add-on (Yes/No)
Device Protection	Device protection add-on (Yes/No)
Tech Support	Tech support add-on (Yes/No)
Streaming TV	Streaming TV add-on (Yes/No)
Streaming Movies	Streaming Movies add-on (Yes/No)
Contract	Contract type (Month-to-month/One year/Two year)
PaperlessBilling	Paperless billing (Yes/No)

Column	Description
PaymentMethod	Payment method type
MonthlyCharges	Monthly charges
TotalCharges	Total charges

Customer churned (Yes/No)

1. Data Collection

Objective:
Collect customer data to predict churn and analyze behavior for retention strategies.

Dataset Used:

- Telco Customer Churn Dataset
- Columns include: customerID, gender, Senior Citizen, tenure, MonthlyCharges, TotalCharges, and multiple service usage columns like Phone Service, Streaming TV, etc.

Source:

- Publicly available dataset (Kaggle / company anonymized data)

Key Points:

- Dataset contains **7043 customers** and **21+ features**
- Target variable: Churn (Yes = 1, No = 0)

Business Goal:

- Identify customers likely to churn
- Recommend retention strategies based on customer behaviour
